Predicting the Future with LLMs

Predicting future events is both hugely valuable and incredibly difficult. Our goal is to **use large language models to make forecasting easier**. We do this by leveraging existing knowledge embeddings and carefully designed prompts—all without the need for fine-tuning.

End-to-End LLM Forecasting Pipeline

What is Prompt Enrichment?

User Input

Question: How many total hurricanes will occur in the Atlantic Ocean in the 2022 hurricane season, according to the National Hurricane Center?

Choices:

- A - 3 or fewer
- B - Between 4 and 6
- C - Between 7 and 9
- D - Between 10 and 12
- E - Between 13 and 15
- F - 16 or more

Automated prompt

Question: How many total hurricanes will occur in the Atlantic Ocean in the 2022 hurricane season, according to the National Hurricane Center?

Choices:

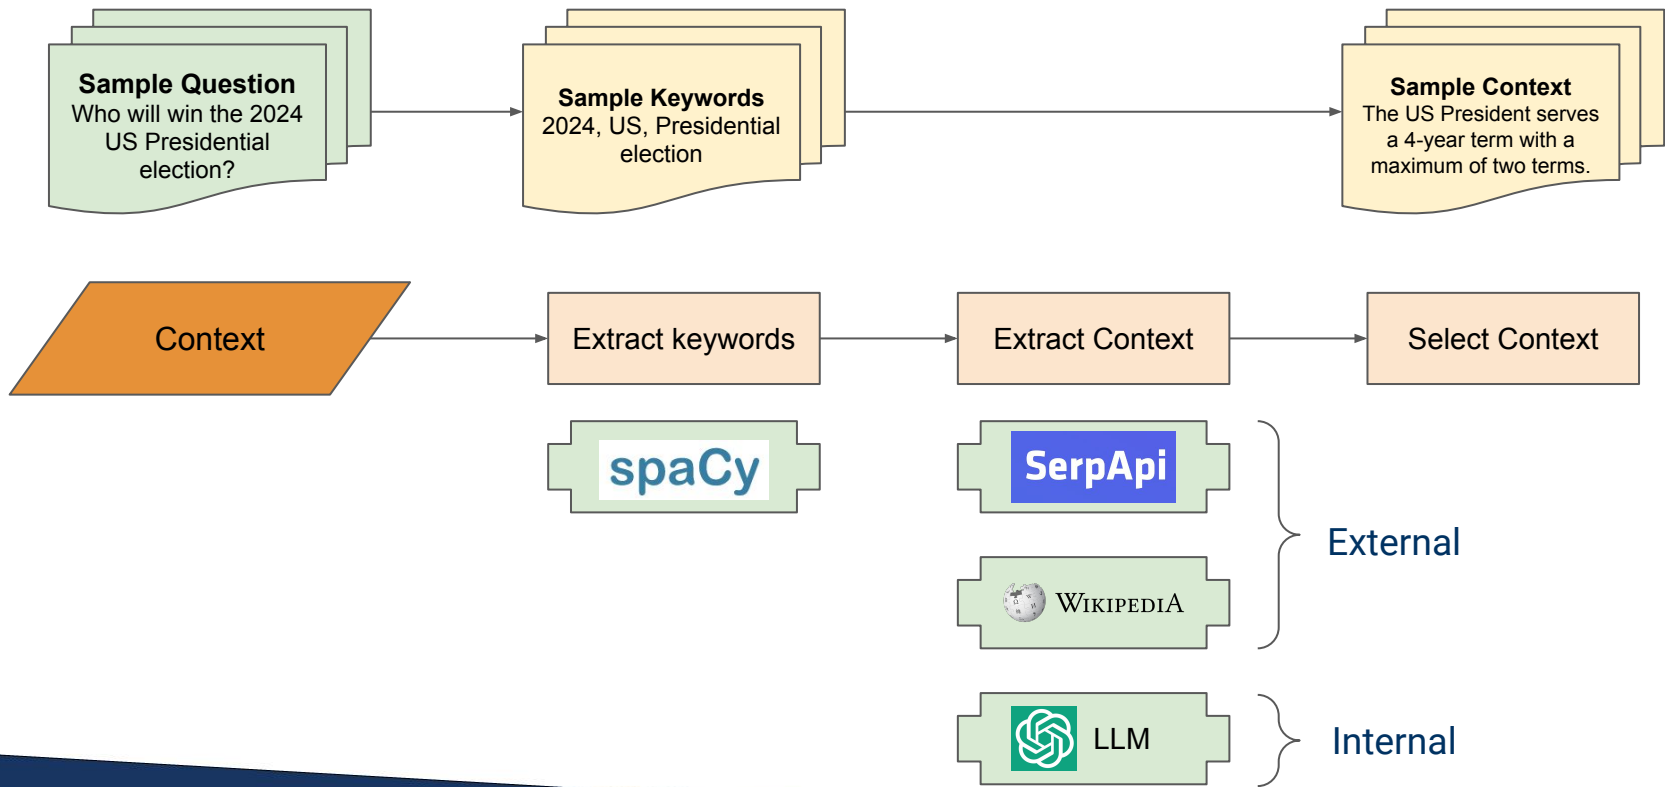

- A - 3 or fewer
- B - Between 4 and 6
- C - Between 7 and 9
- D - Between 10 and 12
- E - Between 13 and 15
- F - 16 or more

Background Research:
{ generated context }

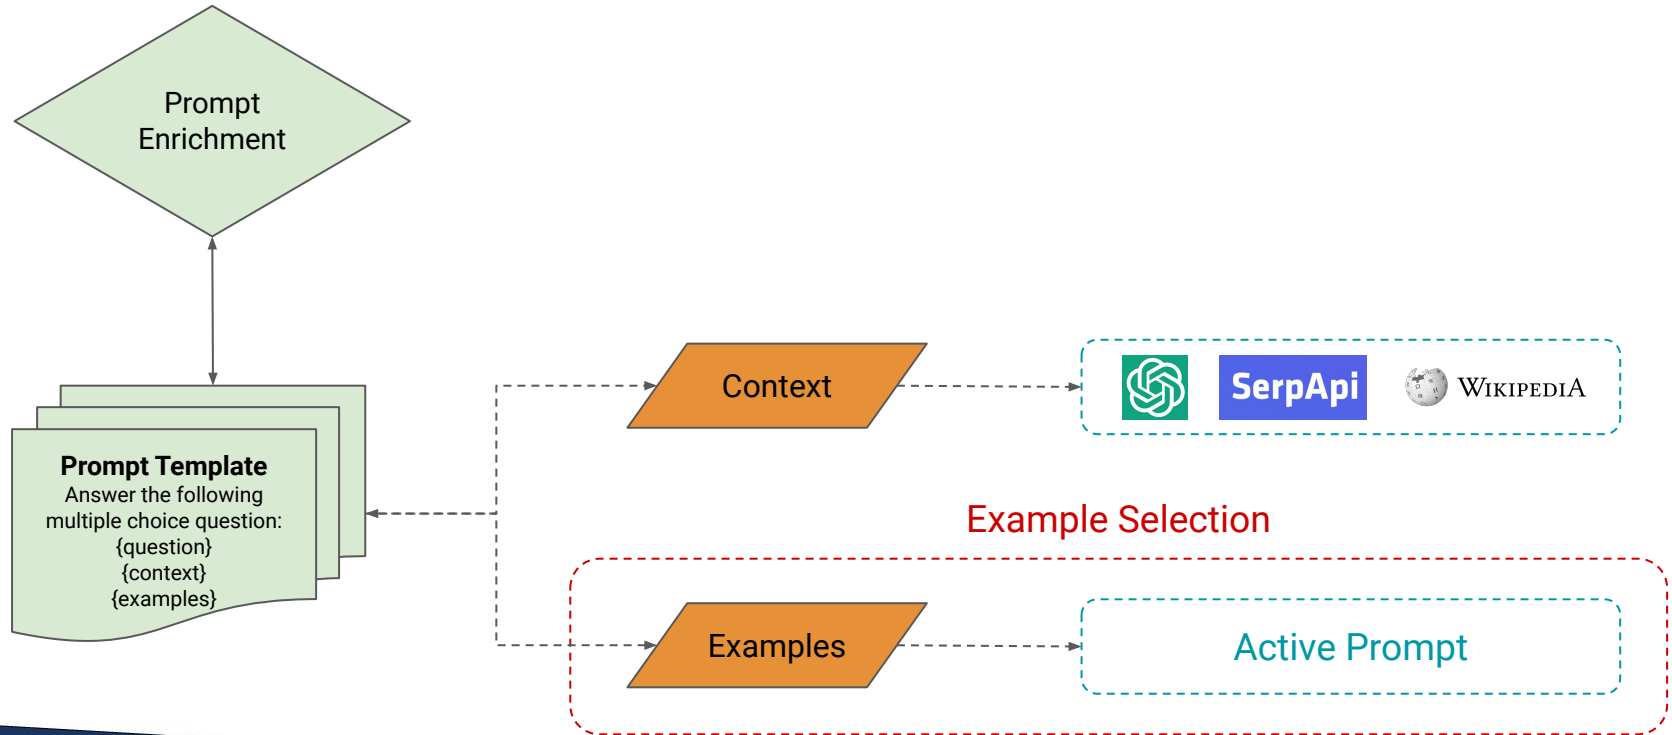

Prompt Enrichment - Context

Prompt Enrichment - Context

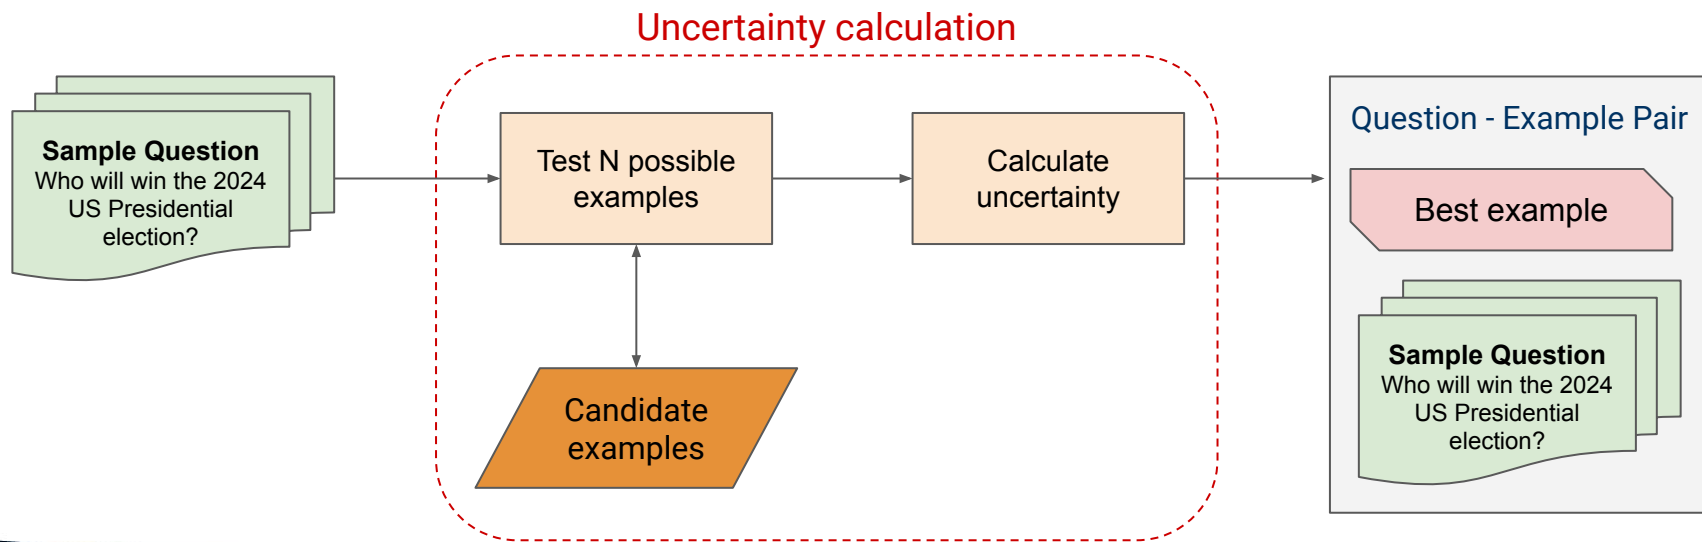

Prompt Enrichment - Example Selection

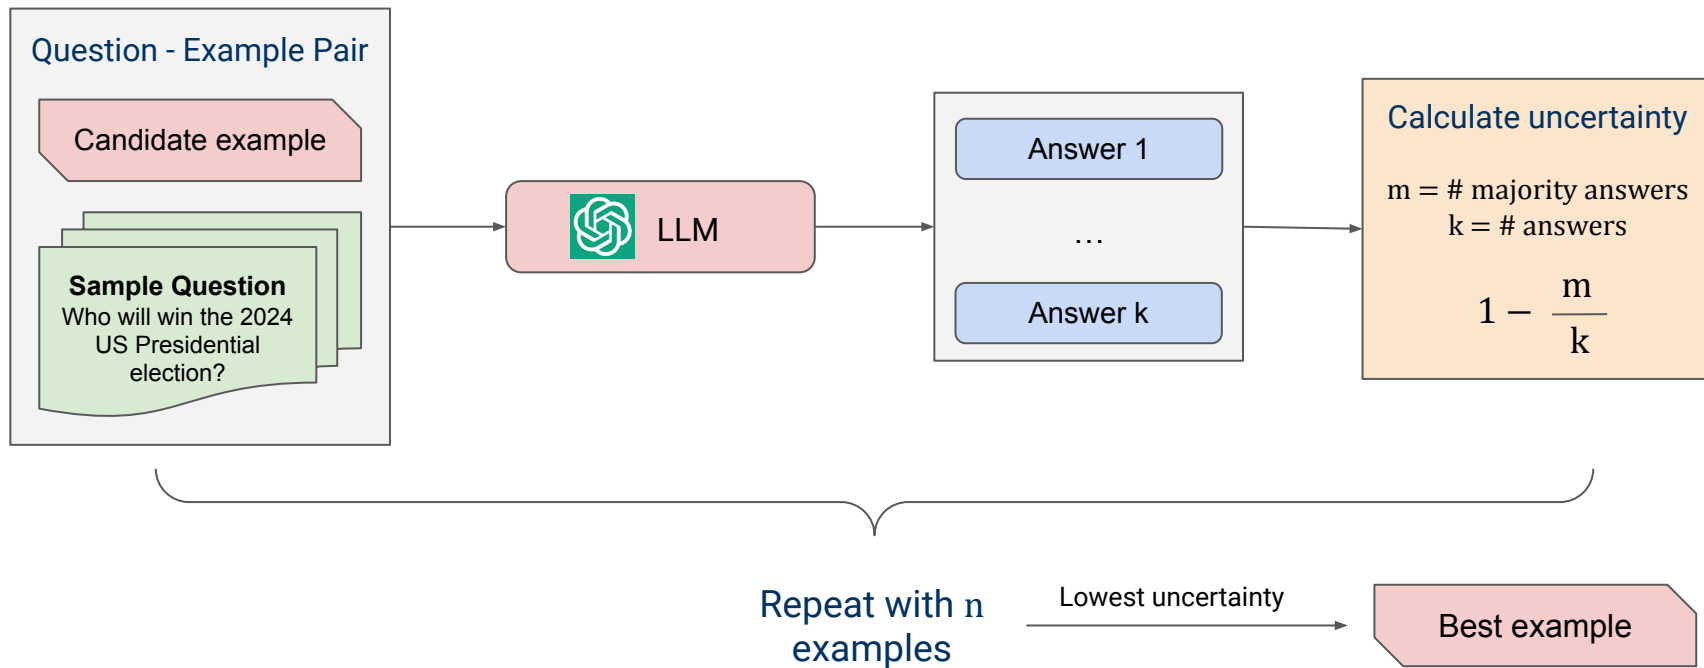

Prompt Enrichment - Active Prompt

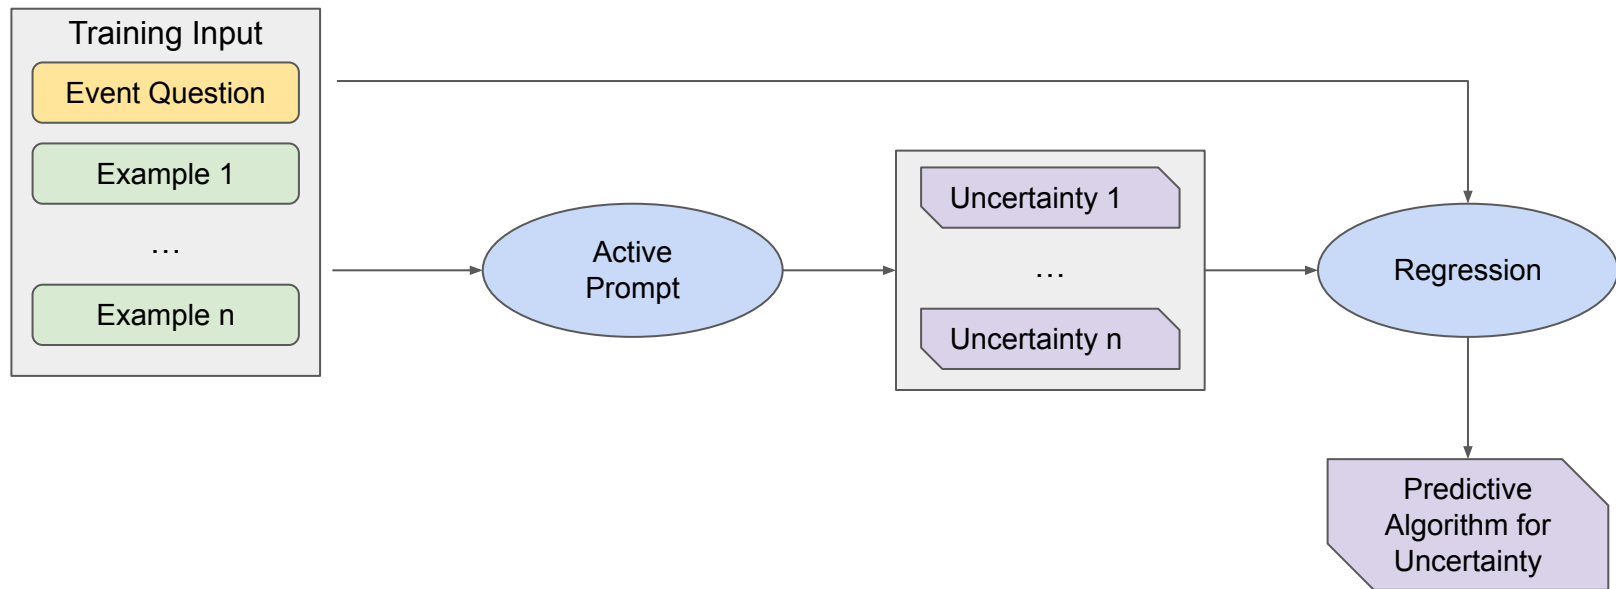

Active prompt lets us **select the best example** for a given question, based on how it **reduces model uncertainty**.

Central Tech Challenge for Regressor:

- High dimensionality of input data demands complex model
- Low data volume demands simpler model

Solution:

End-to-End LLM Forecasting Pipeline - Demo

Context Enrichment Pipeline

Choose a question:

What will be the FAO Food Price Index for June 2022?

Question: What will be the FAO Food Price Index for June 2022?

Choices:

A - Less than 120.0

B - Between 120.0 and 130.0, inclusive

C - More than 130.0 but less than 140.0

D - Between 140.0 and 150.0, inclusive

E - More than 150.0

Evaluation Dataset

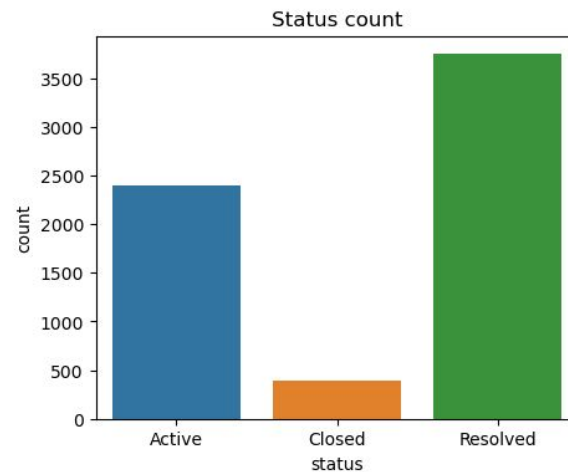

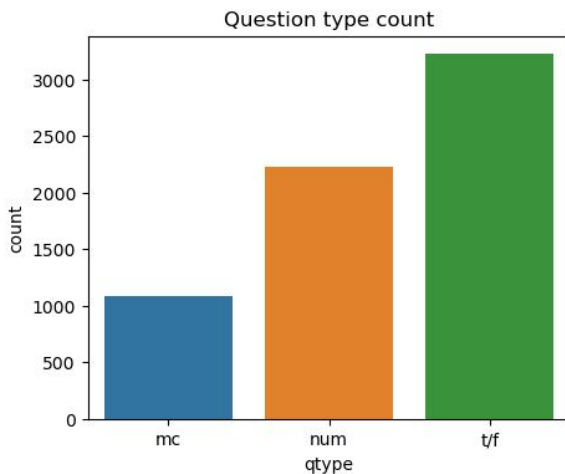

Sample Question:

What will the end-of-day closing value for the dollar against the renminbi be on 1 January 2016?

Choices:

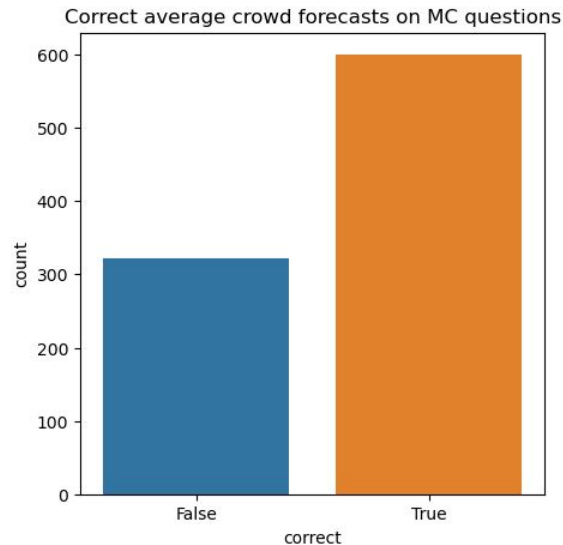

['Less than 6.30', 'Between 6.30 and 6.35, inclusive', 'More than 6.35 but less than 6.40', '6.40 or more']

Answer: D

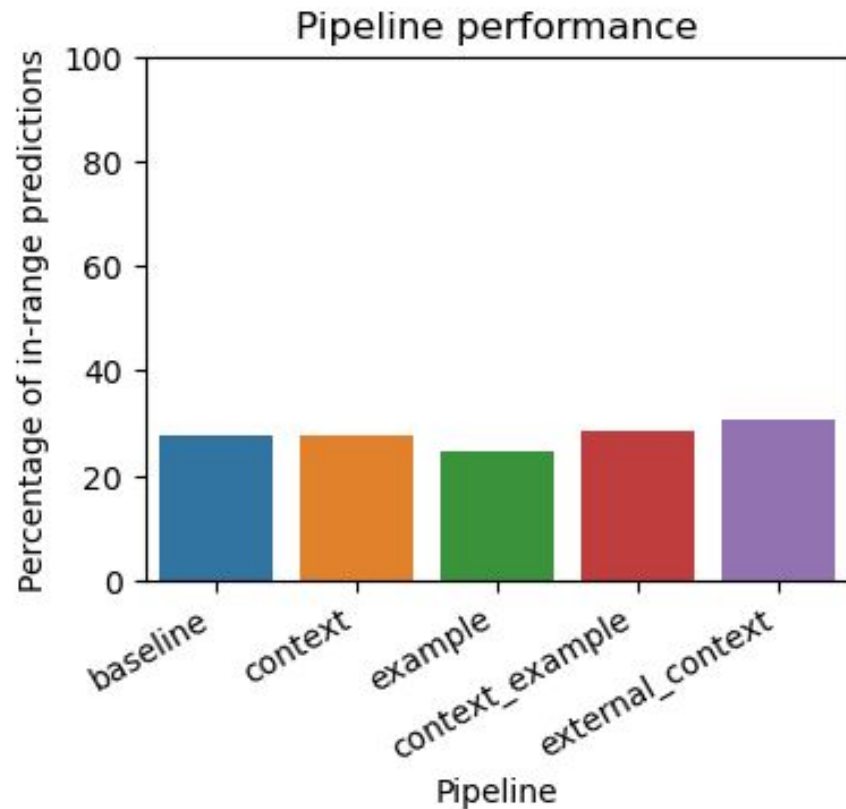

Evaluation Metric

Crowd forecasts are an **imperfect truth proxy**, but still a useful target for our pipeline.

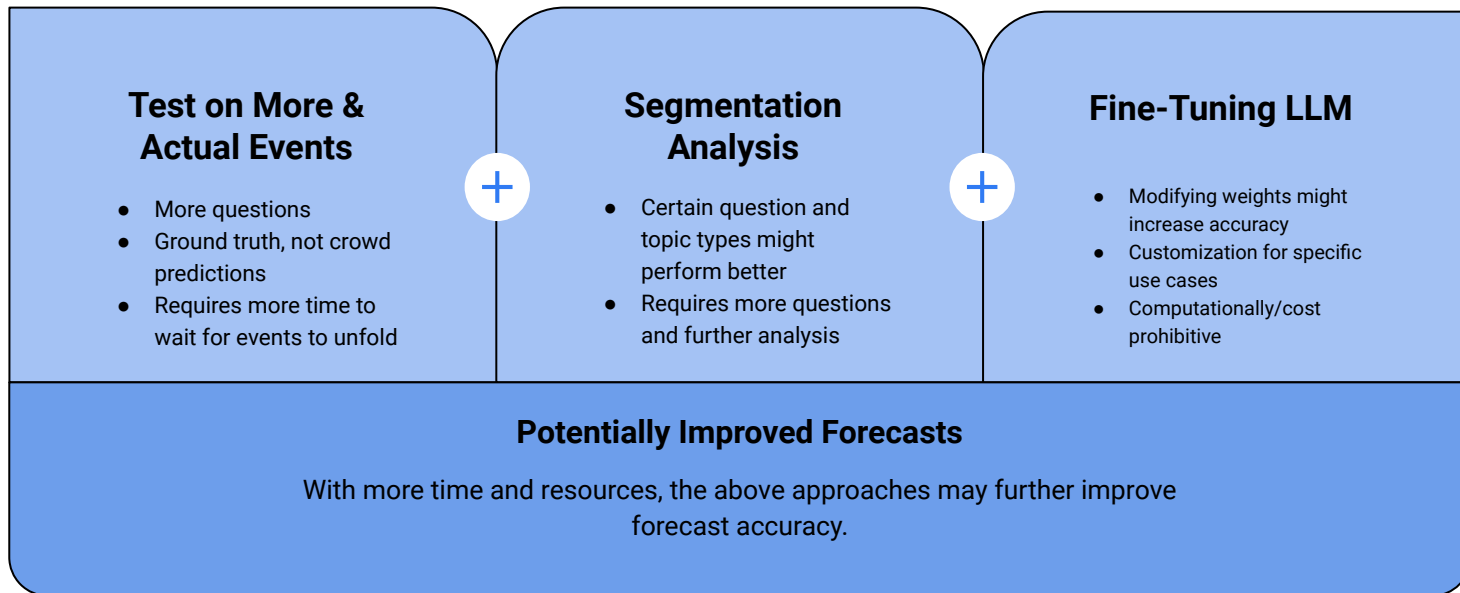

Pipeline Performance

Pipeline	% in-range predictions
Baseline	27.55%
Context	27.55%
External context	30.61%
Example	24.49%
Context + example	28.57%

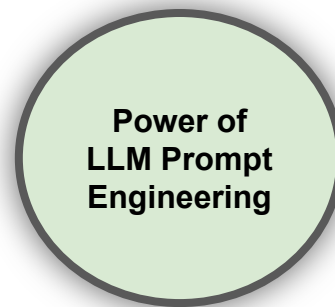

Future Work

Future endeavors without current time or cost constraints could improve forecasting results.

Conclusion

- Minimal increases in forecasting performance when prompt engineering for **additional context**.
 - Larger sample needed for effective active learning model.
 - Target isn't reliable given the crowd's predictions are not always accurate.
- Putting forecasting aside, we learned the **power of LLMs, prompt engineering, and automated active learning** given minimal user queries.
